WHO WE ARE

# Business problem first. Technology second.

QLOAX is a Innovative Digital Studio, IT, AI and cloud company. We digitise operations for growing businesses: the ERP a factory runs on, the platform a school group runs on, and the compliance system a clinic needs under India's DPDP Act.

### Custom software & ERP

Multi-tenant platforms, industry ERPs, portals and workflow systems.

### AI & automation

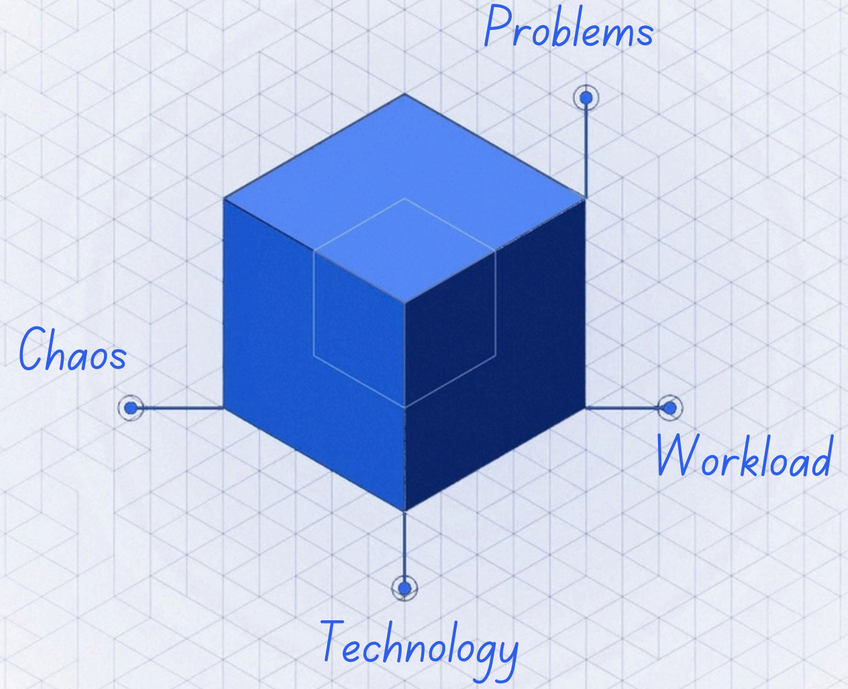
Assistants, forecasting and anomaly detection grounded in your own data.

### Compliance technology

Find personal data, map what the DPDP Act requires, close the gaps, keep the evidence.

### Strategically Built Websites

E-commerce and portfolio sites built for Google and for AI search.



THE PORTFOLIO

# What we've built

**01** **School ERP** — OWN PRODUCT
Multi-tenant SaaS for schools and school groups

**02** **OVI Enterprises ERP** — CLIENT
Custom ERP for a tool-cutting manufacturer

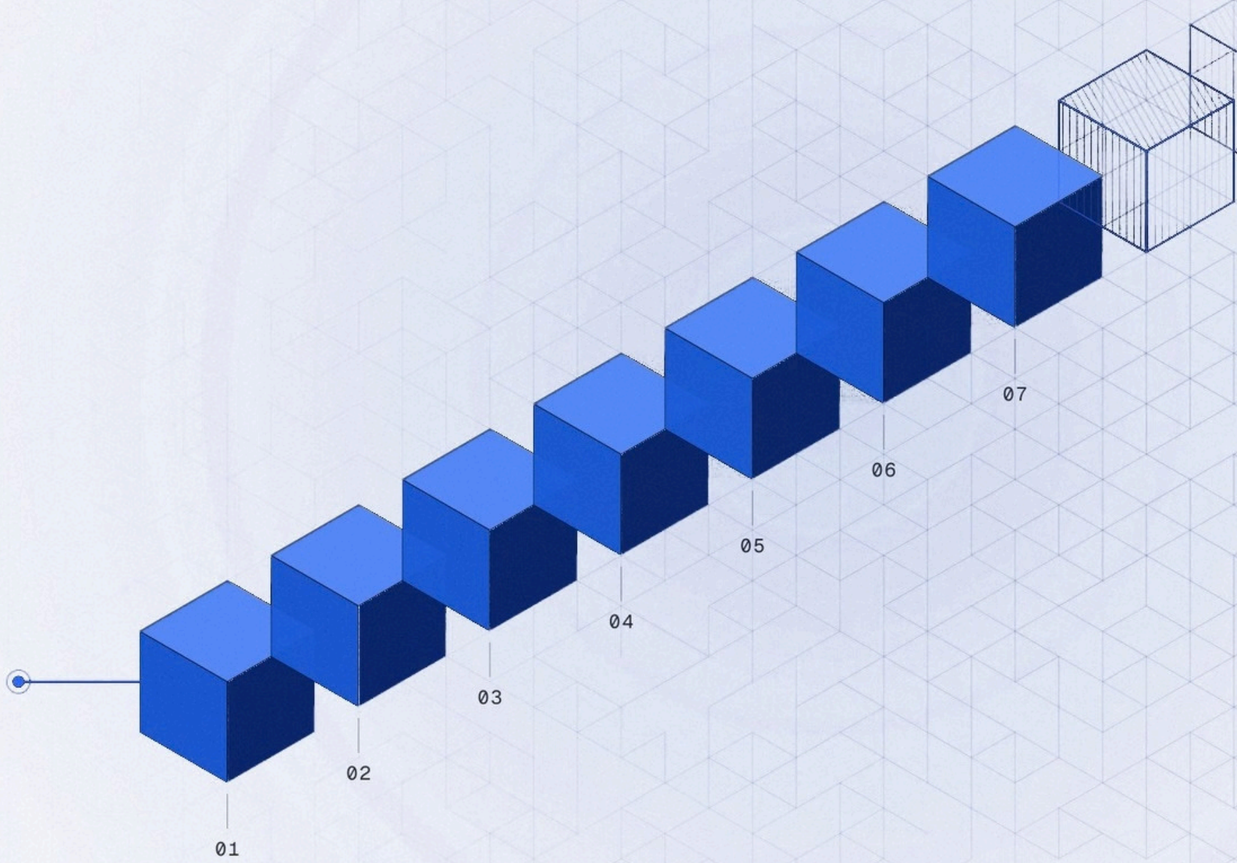
**03** **Forge 4.0** — OWN PRODUCT
QR-assisted shop-floor ERP for manufacturers

**04** **Traceability ERP + AI** — CLIENT BUILD
Barcode dispatch control with an AI intelligence layer

**05** **Skillitrix** — B2C PRODUCT
AI-native placement preparation for students

**06** **Qloax Privacy OS** — OWN PRODUCT
DPDP compliance management system, V1

**07** **Strategically Built Websites for Growth** — SERVICE
E-commerce and portfolio sites, SEO and AI-search ready



# School ERP

One multi-tenant platform for a single school or a whole group, from first enquiry to payroll.

### Multi-tenant by design

Trust, school and branch levels, with each tenant's data kept separate and admin roles at every level.

### 75+ modules

Admissions CRM, student records, attendance, timetable, exams, fees, transport, HR and payroll.

### Role-based dashboards

Purpose-built views for admins, teachers and parents, with an audit log on every action.

### Parent portal

Attendance, fee status, notices, event media and feedback in one place.

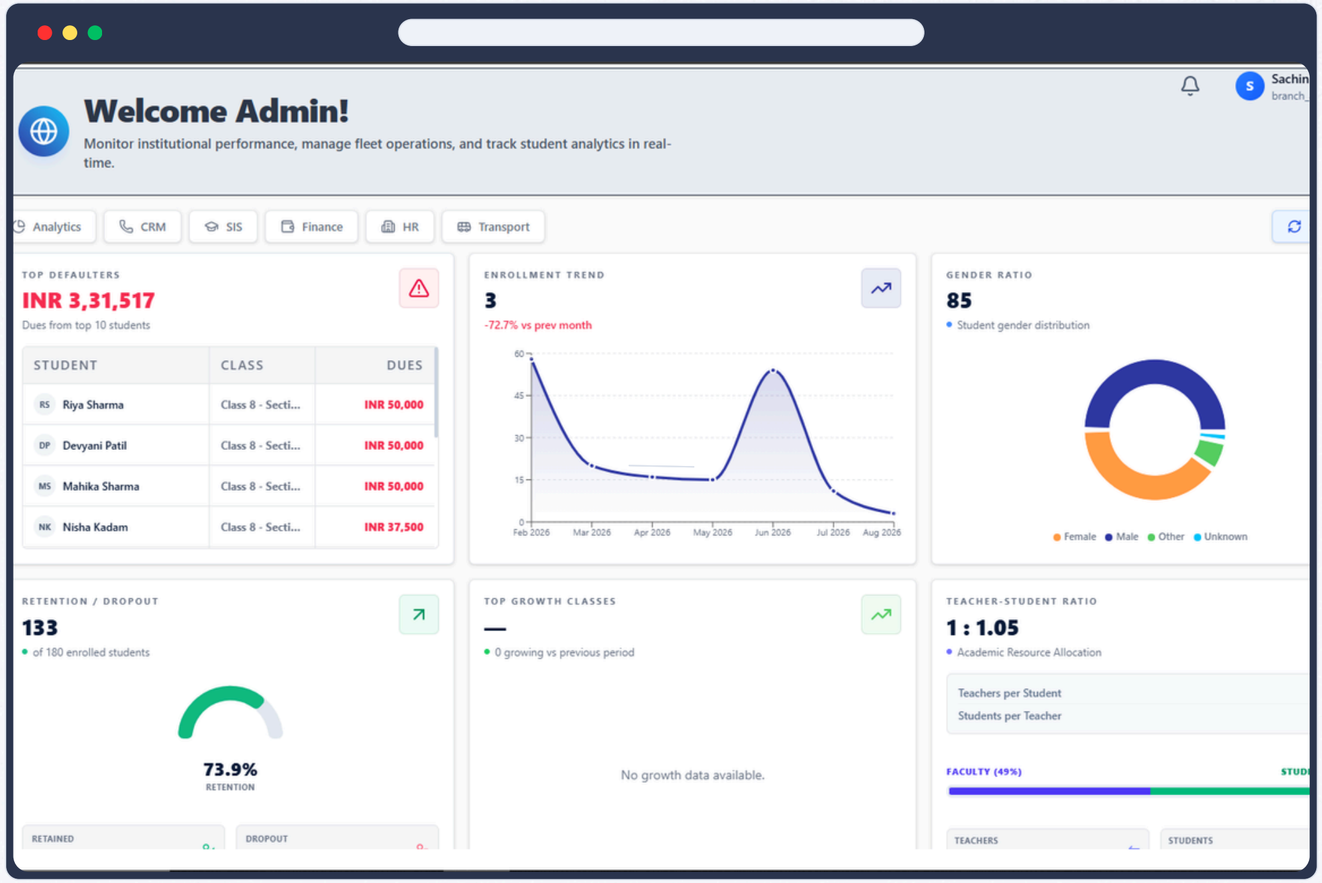


**FIG. A** Admin dashboard

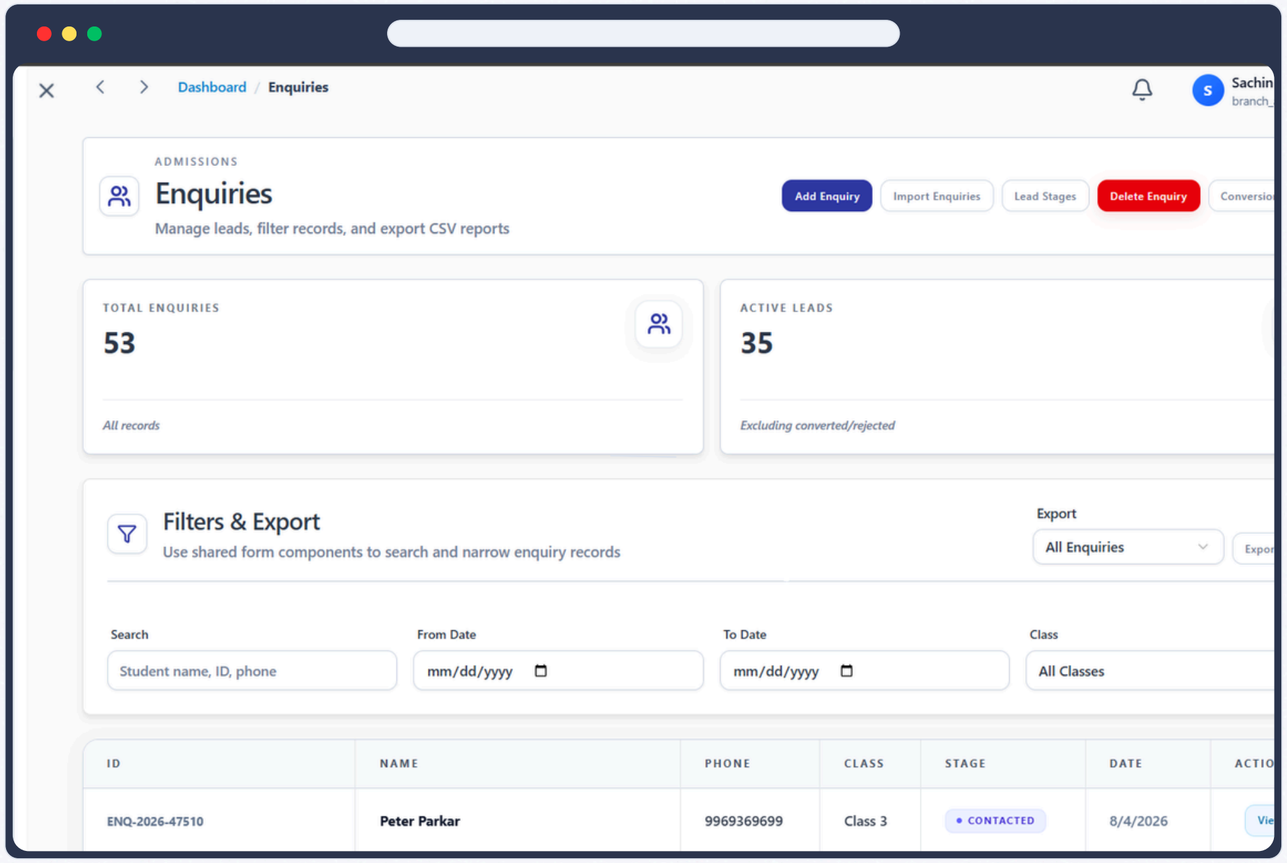
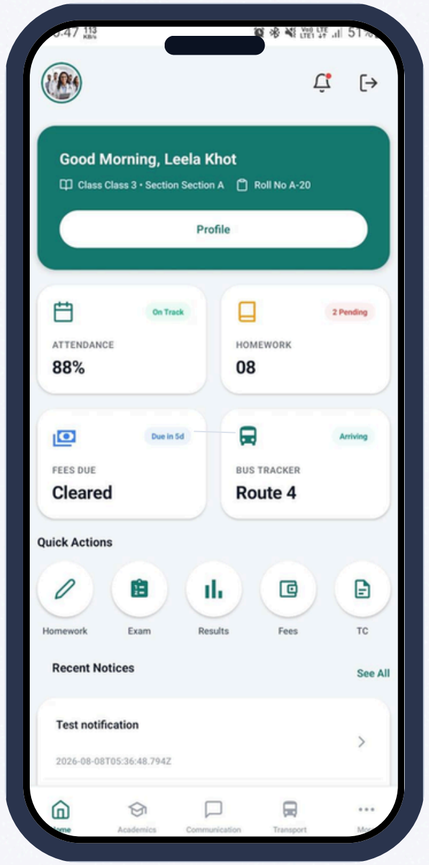
# From enquiry to payroll, on one login





## A Admissions CRM

Every enquiry captured, assigned to a counsellor and followed up by email and SMS. QR-code forms feed campaigns straight in.

## B Parent app

Parents see attendance, fees and notices, and send feedback, from their phone.

### ALSO INSIDE

Fees with instalments and GST · Payroll and payslips · Transport routes · Events · Documents · Reports

# OVI Enterprises

A custom ERP for a tool-cutting manufacturer, designed with the team on their shop floor.

### Enquiry to quotation, one flow

Enquiries, RFQs and quotations live in one system, and quotations go out as clean PDFs.

### Revision history

Every quotation revision is versioned, with a log of what changed and when.

### Approval tickets

Anything outside the normal flow becomes a role-aware ticket instead of a phone call.

### Role-based dashboards

Admin and team views with quick actions for new enquiries and quotations.

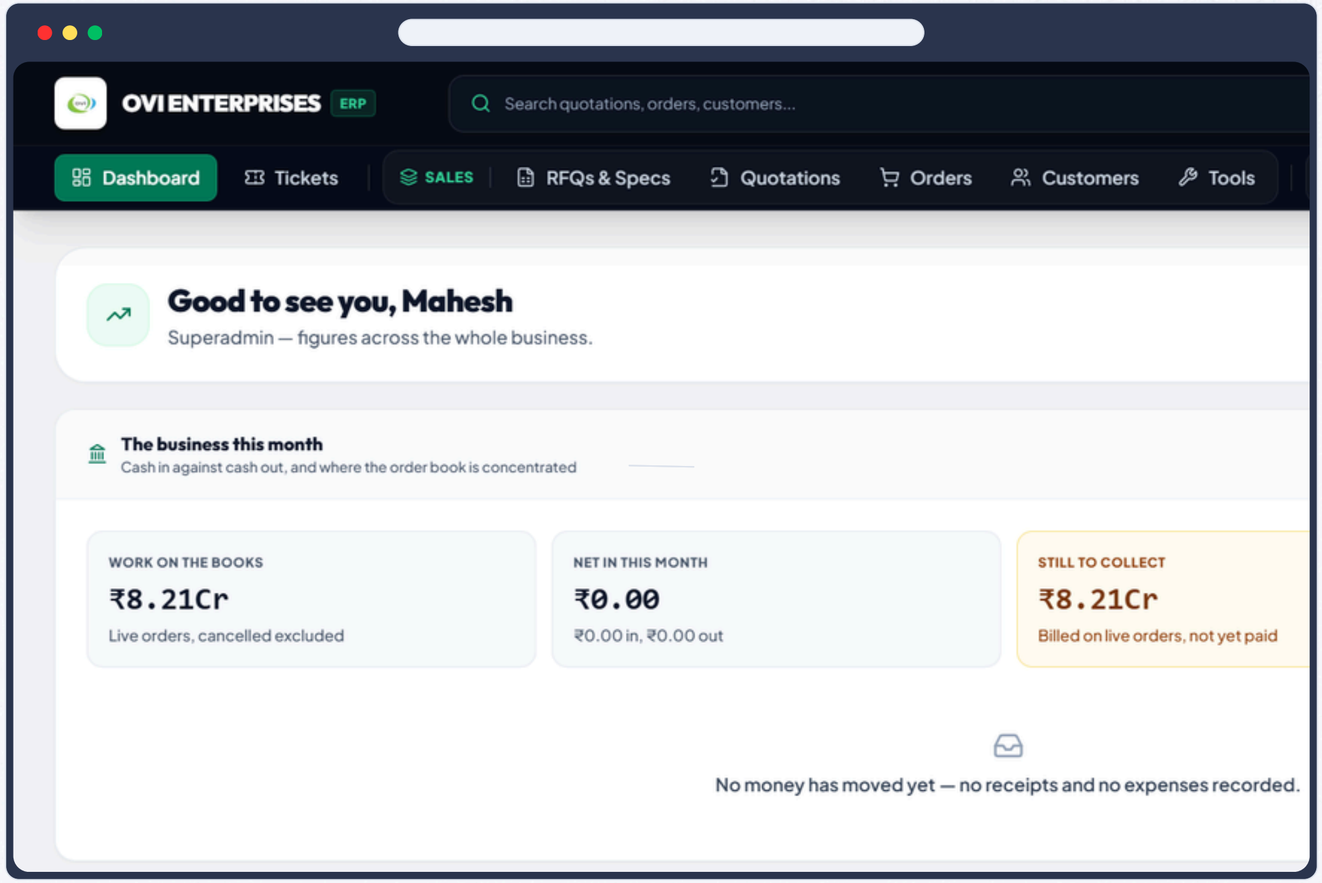


**FIG. A** Admin dashboard

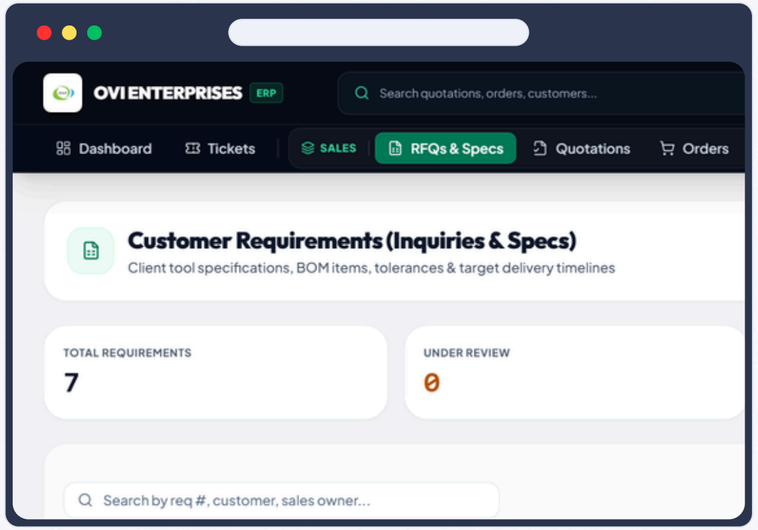
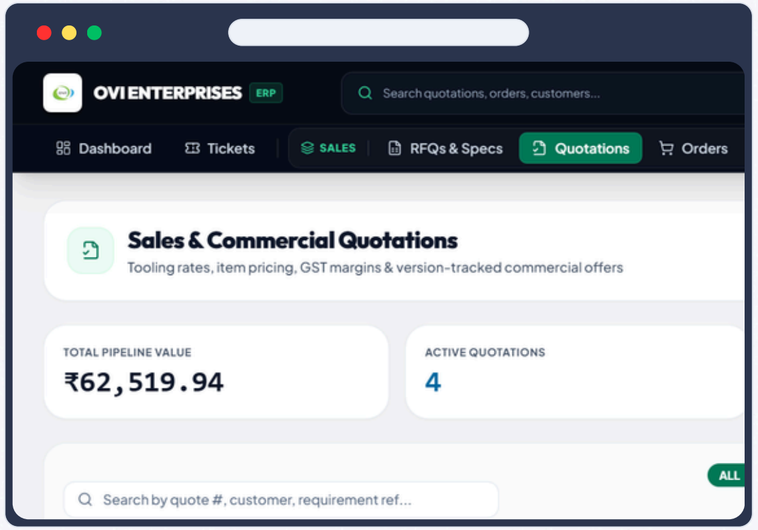
# Shaped by the team that uses it



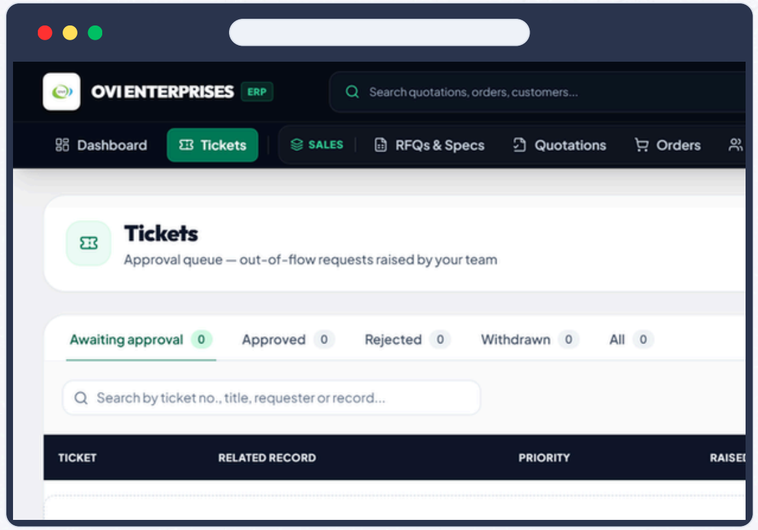
## A Enquiries & RFQs

Every enquiry logged with its RFQ, owner and status, and opened in a pop-up without losing your place.



## B Quotation & revisions

Laid out like the PDF the customer receives, with each revision kept in a log.



## C Approval tickets

Out-of-flow approvals routed to the right role and tracked to closure.

**Enquiry** — **RFQ** — **Quotation** — **Revision** — **Approval** — **Order**

# Traceability ERP

Barcode control for an automotive gasket maker, from the packing line to the security gate.

### One chain, five stations

Parts, packing, box, invoice and gate, with each stage locked once it is complete.

### Gate verification

Security scans the invoice and every box; missing, extra or mismatched boxes are flagged before exit.

### Role-scoped access

Admin, packing, finished goods, invoicing and gate security each see only their station.

### Audit-ready records

Gate-out reports record invoice, vehicle, time, officer and box count for every dispatch.

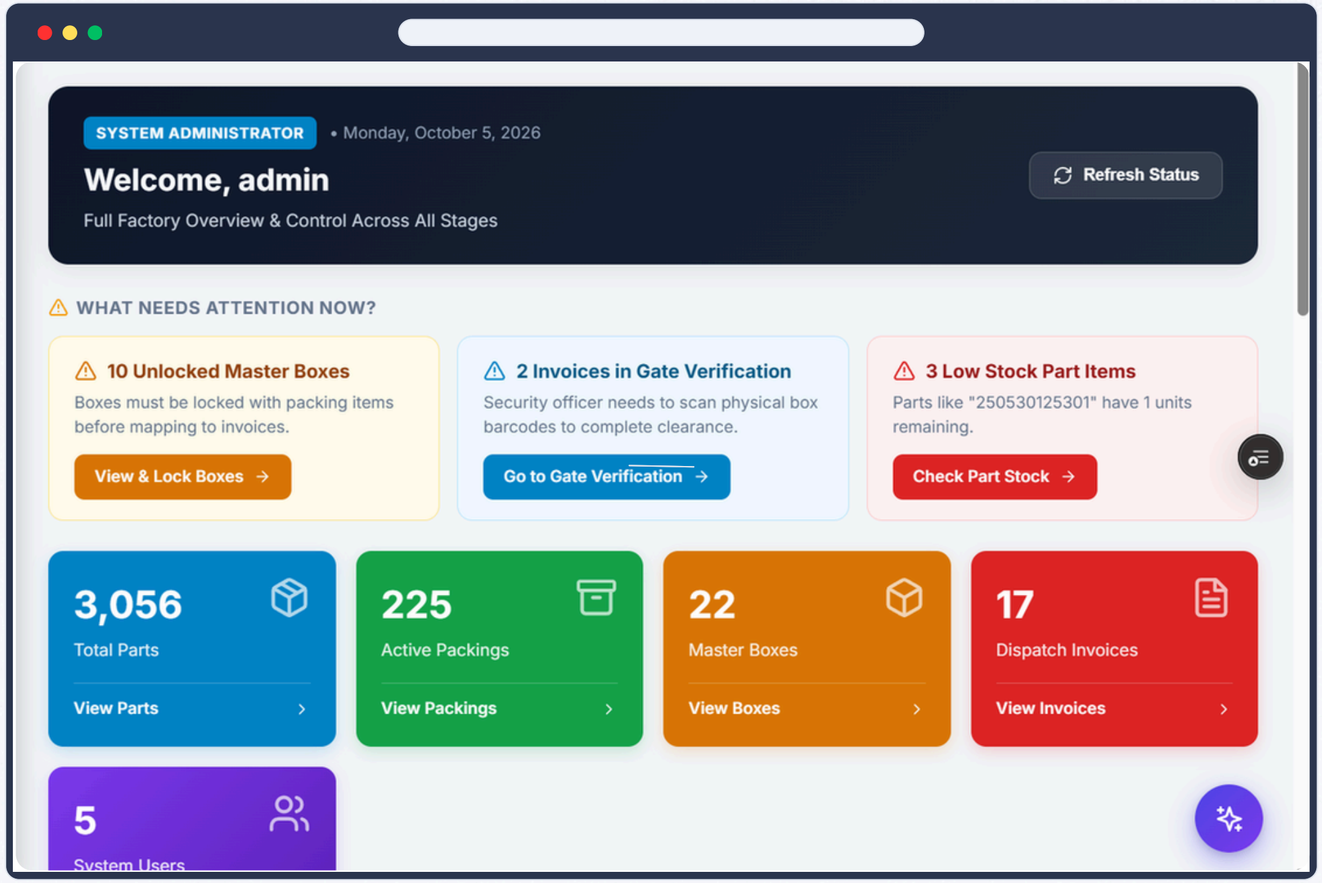


**FIG. A** Gate verification

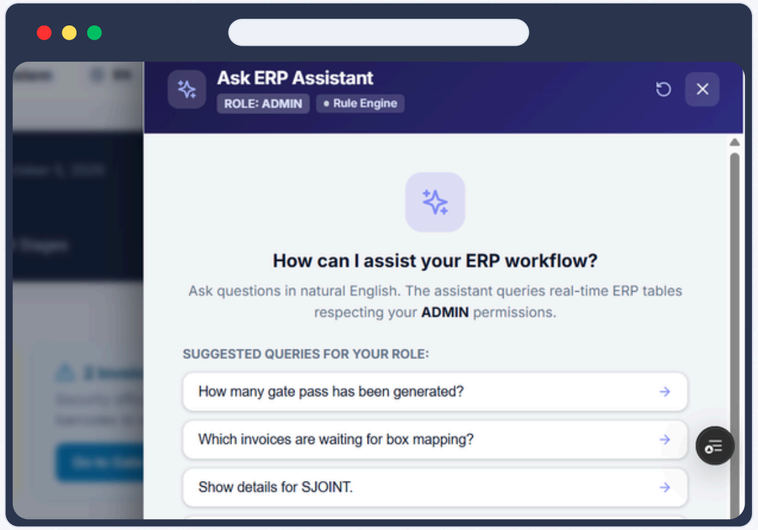
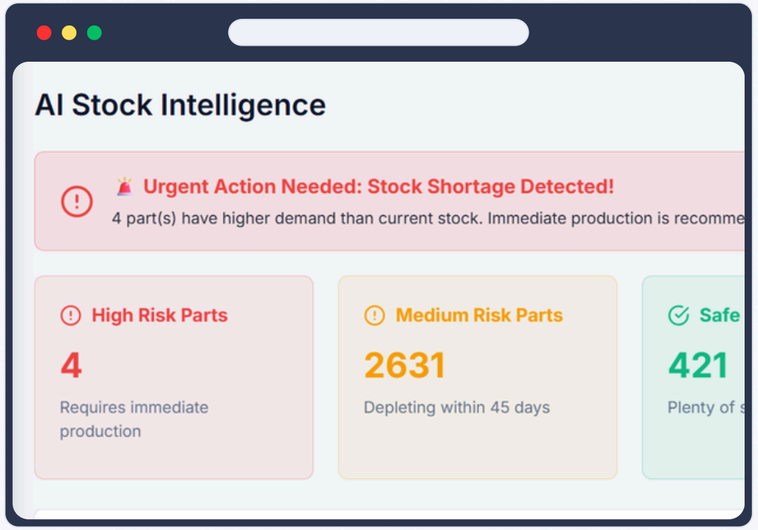
# AI that reads the ERP and leaves decisions to people



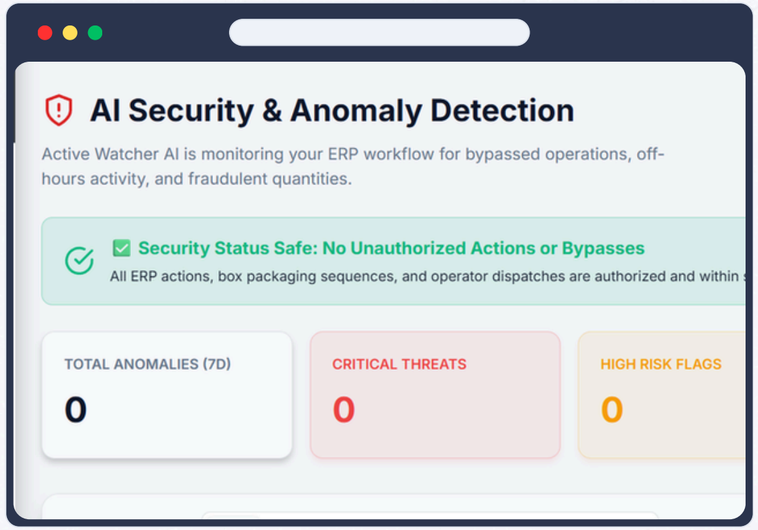
## A Ask ERP

Plain-language questions on stock, invoices and dispatch, answered from ERP records within the user's role.



## B AI Stock Intelligence

30-day demand forecast from a 90-day baseline and recent trend, plus a 15% buffer, flagging parts at risk.



## C AI Security Hub

Flags off-hours dispatch, impossible packing speeds and unusual quantities, with evidence and a next step.

**GUARDRAILS** Read-only AI · Human sign-off for dispatch and stock changes · Every alert shows what, why, evidence, risk score and action

# Skillitrix

AI-native placement preparation: practise against the real clock and see exactly where marks are lost.

### Company-style mock tests

Timed rounds in aptitude, reasoning, verbal and coding across six company-style tracks.

### Instant AI scoring

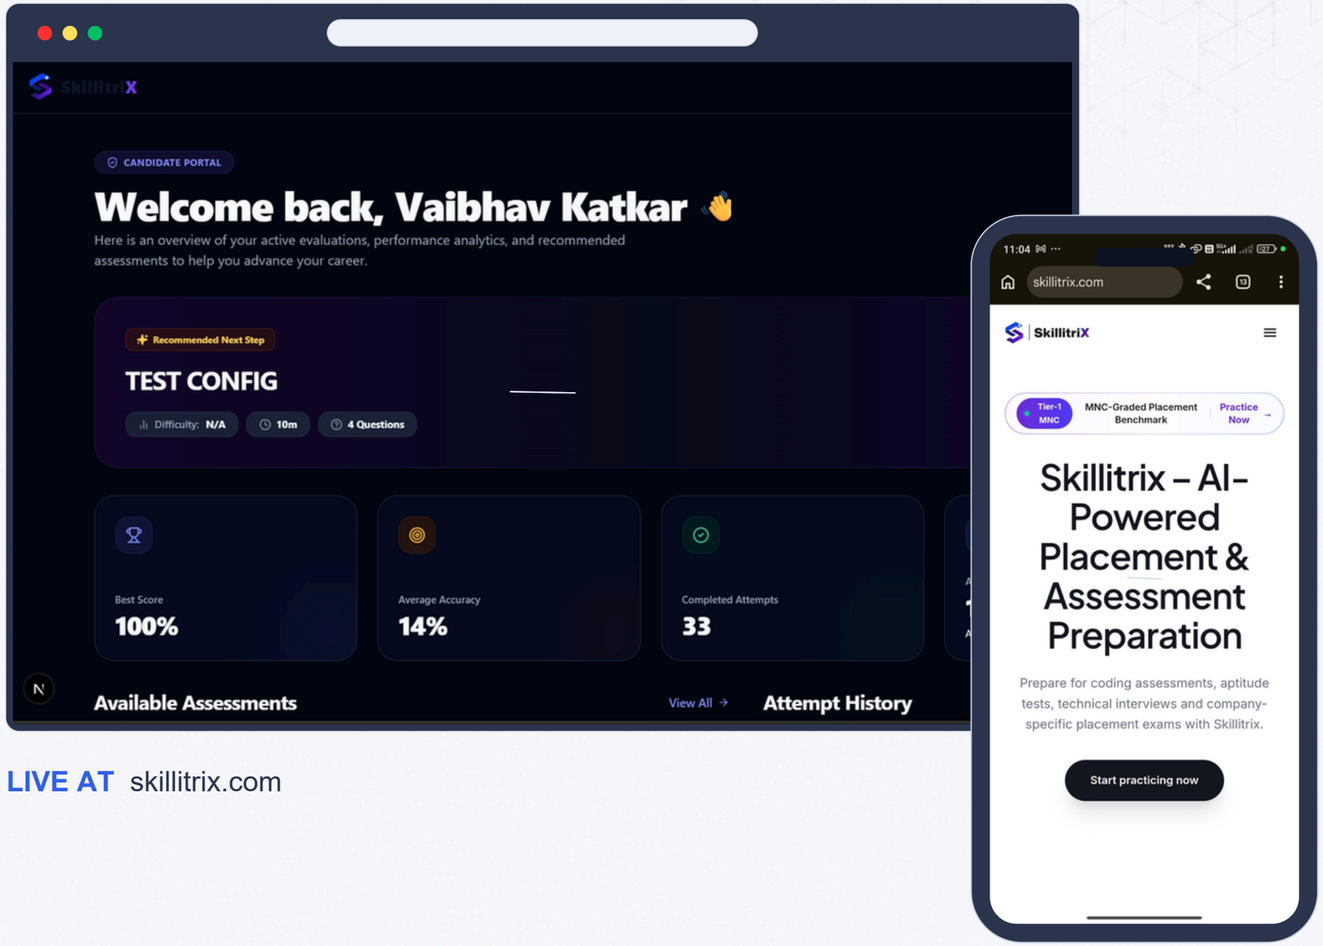
An AI band score and summary on submit, with section-wise strengths and weak areas.

### Real test conditions

Timer, question navigation, answer tracking and auto-save, as on test day.

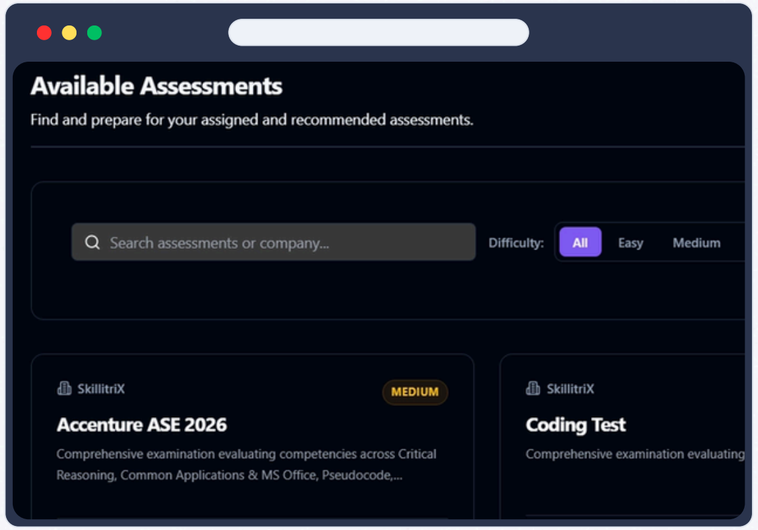
### Progress over time

Past attempts saved and compared, so improvement is visible round after round.



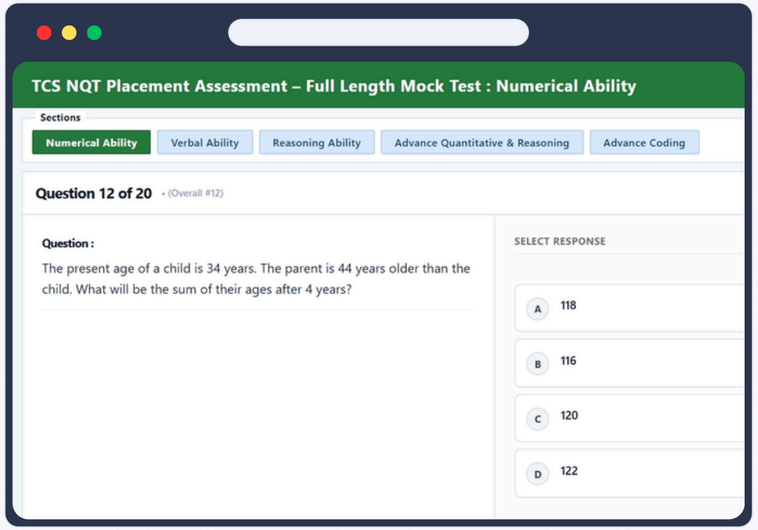
**LIVE AT** skillitrix.com

# A consumer AI product, built and run end to end



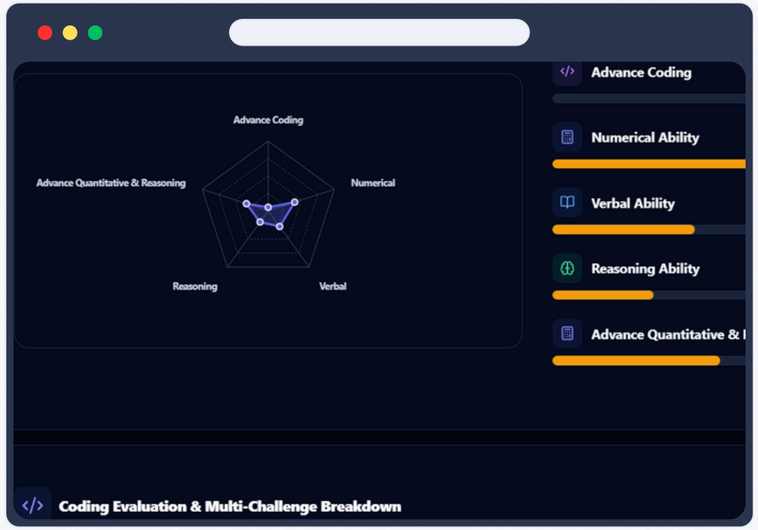
## A Choose a track

Standard practice or a company-style track, each a timed round with real test rules.



## B Test in progress

Section timer, question palette and auto-save, so practice feels like the real test.



## C Results & AI score

Score, accuracy and a section-wise breakdown the moment a round ends, with an AI summary.

**WHAT IT PROVES** QLOAX ships and operates AI products for real users, not only client projects. Free and Pro plans, live at skillitrix.com.

# Qloax Privacy OS

LIVE · 1 NOV 2026

*“Connect your database on Monday. By Friday, see every place you hold personal data, what the law requires for each, where you are exposed and what it could cost.”*

### Discover and classify

Scans PostgreSQL, MySQL, MongoDB and Amazon S3, classifying personal data with confidence scores and Indian ID checks.

### Draft, assess, score

AI-drafted processing records, a gap assessment with a remediation roadmap, rupee risk exposure and a board-ready score.

### Private by architecture

Personal data stays in an isolated per-tenant worker; only metadata and salted tokens leave it. Evidence sits in a tamper-evident ledger.

Technology for DPDP readiness, not legal advice. QLOAX is not a law firm or a government body, and there is no government DPDP certificate.

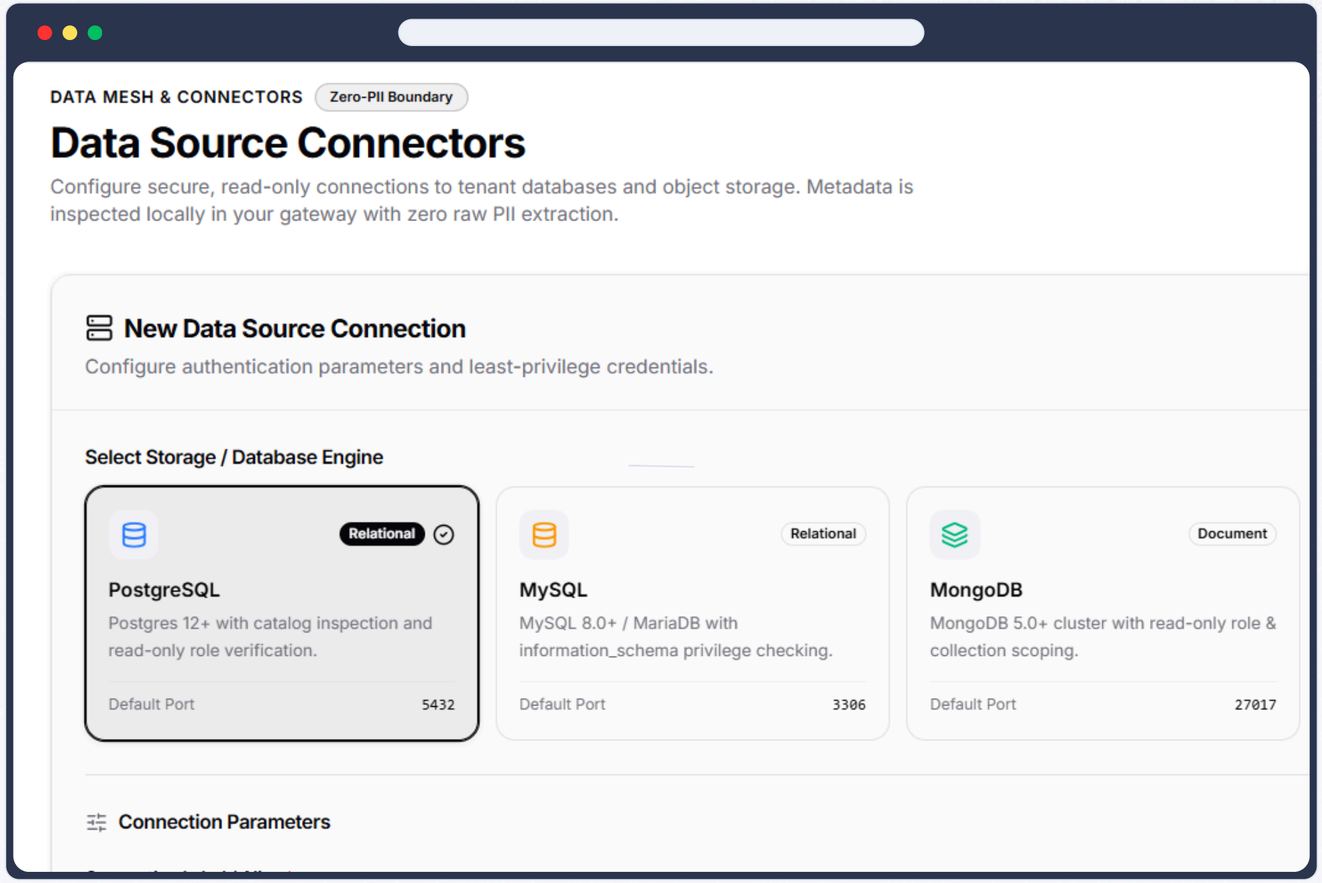


**FIG. A** Compliance posture

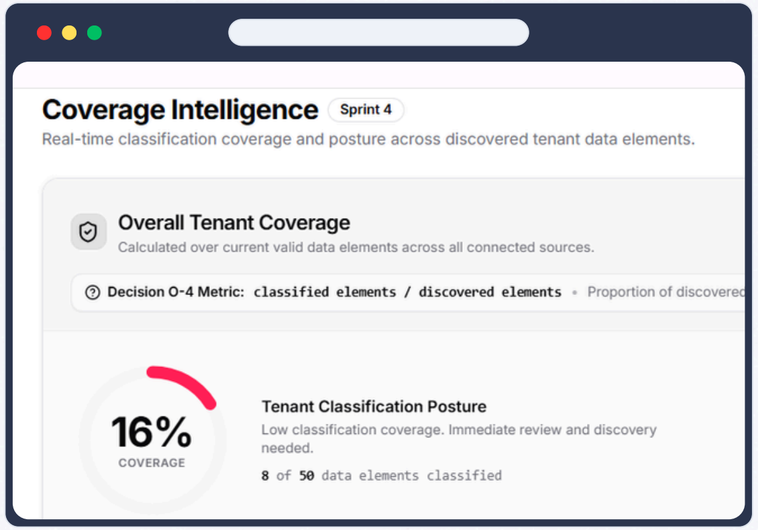
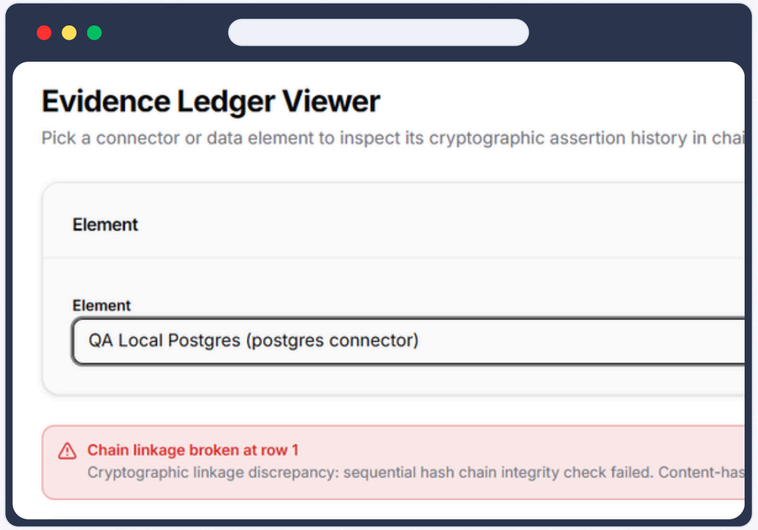
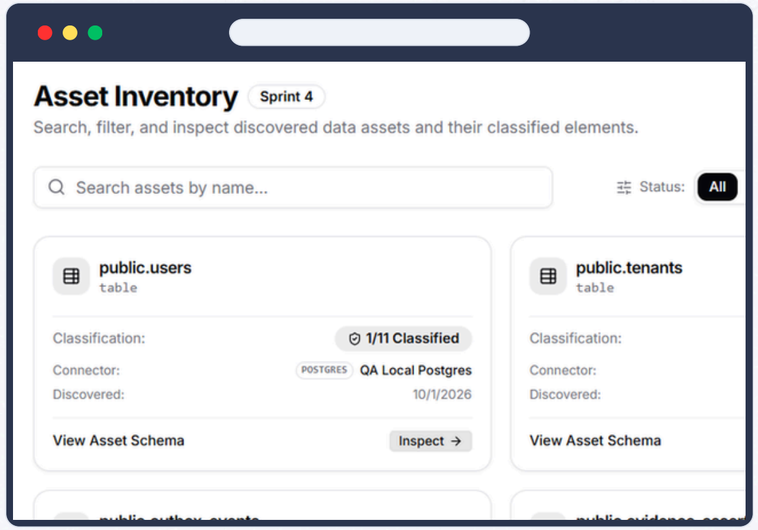
# From first scan to board report in days







## A Data discovery

Tables and buckets scanned, personal-data fields classified, and a published coverage figure for what was scanned.

## B Evidence Ledger Reviewer

Records of processing drafted from evidence; business owners confirm or correct them on their phone in minutes.

## C Gap assessment

Obligations mapped to findings, a sequenced remediation roadmap and a rupee figure on each exposure.

**NEXT, 2027** Consent capture and preference centre · Data-principal requests · Breach response with statutory clocks · Retention

# Strategically Designed Websites

E-commerce and portfolio websites, built to rank on Google and to be cited by AI search.

### SEO-strong

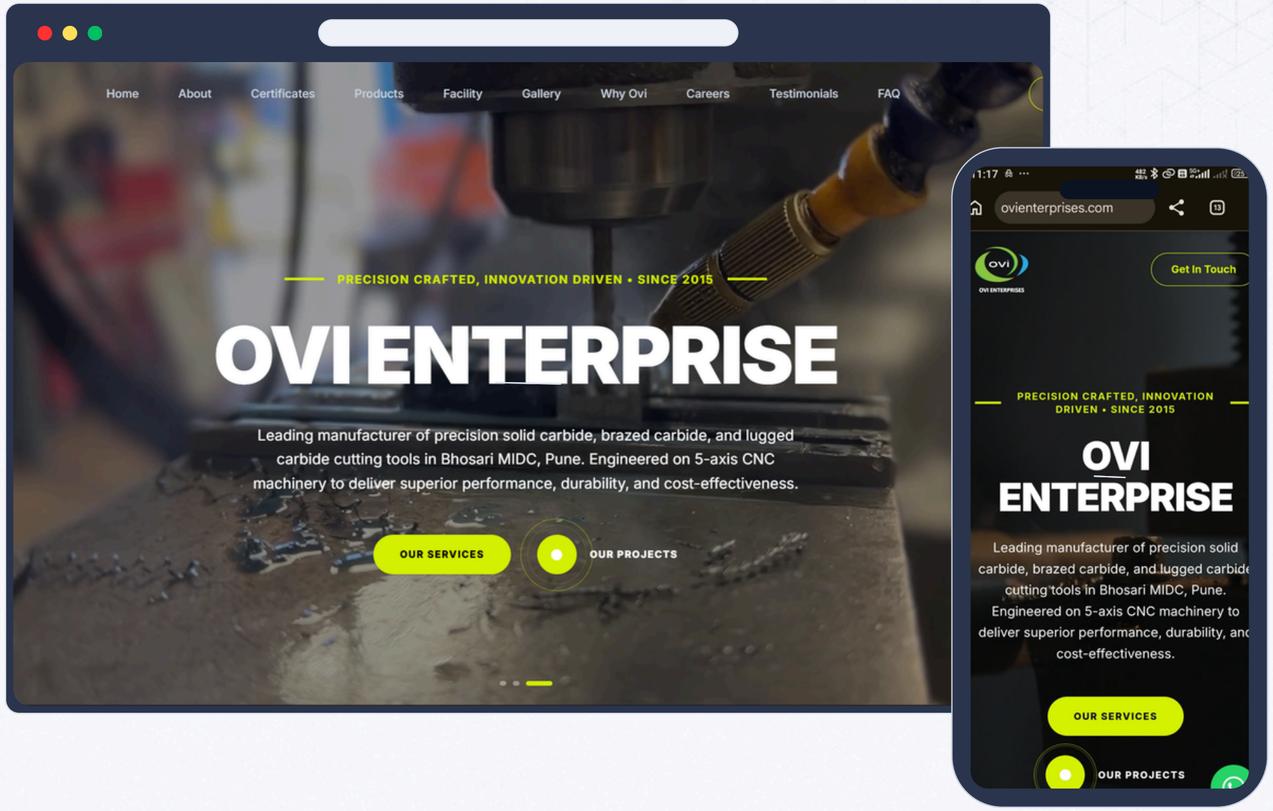
Technical SEO, schema markup, fast mobile pages, clean URLs and sitemaps from day one.

### AI-search ready

Clear entities, FAQs and structured answers that ChatGPT, Perplexity and Google AI Overviews can cite.

### Yours to run

Editable content, analytics and enquiry tracking, plus catalogue, cart and payments for stores.



**DAY 1** — Brief & sitemap

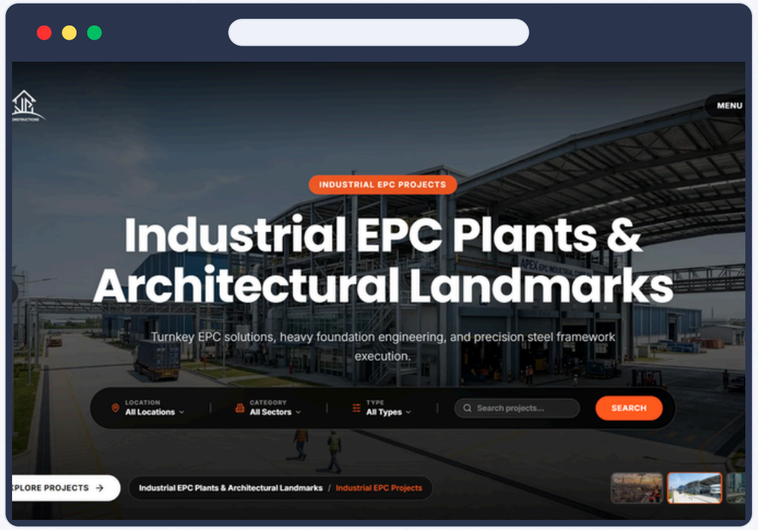
**DAY 2–3** — Design

**DAY 4–5** — Build

**DAY 6** — Content & SEO

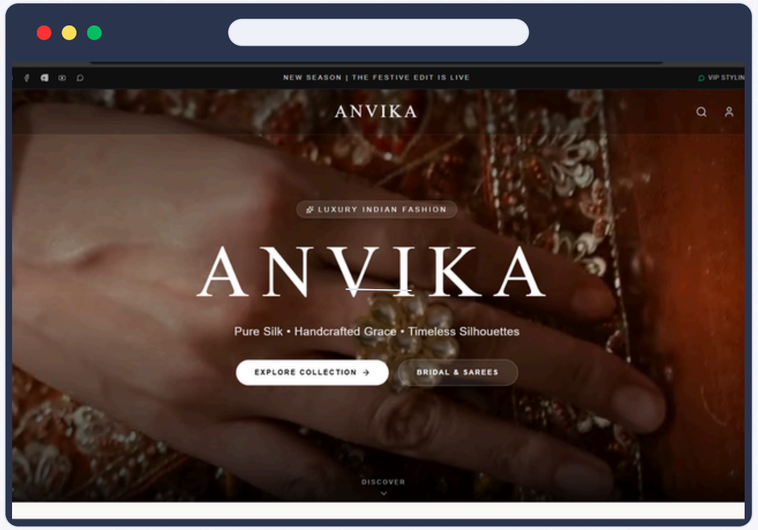
**DAY 7** — Launch

# Recent websites



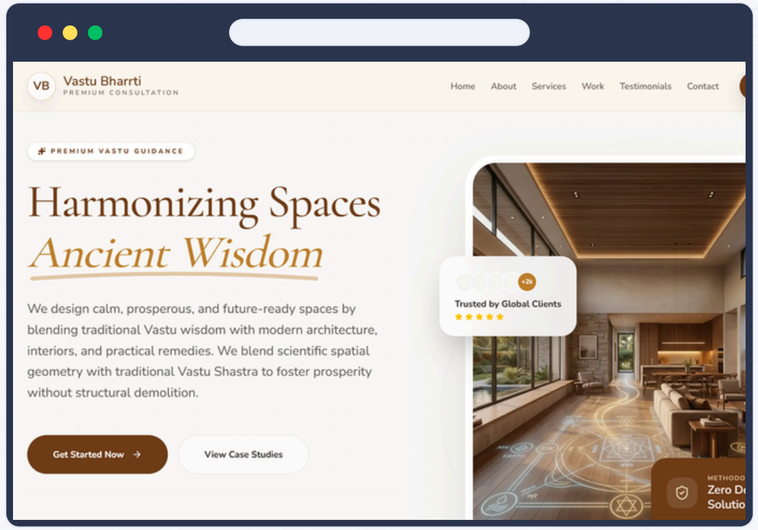
## A Corporate website · VP Construction

Custom-built around the client's brand, colours and content, refined together with their team.



## B E-commerce store

Catalogue, cart and payments, with product schema so listings can surface in search.



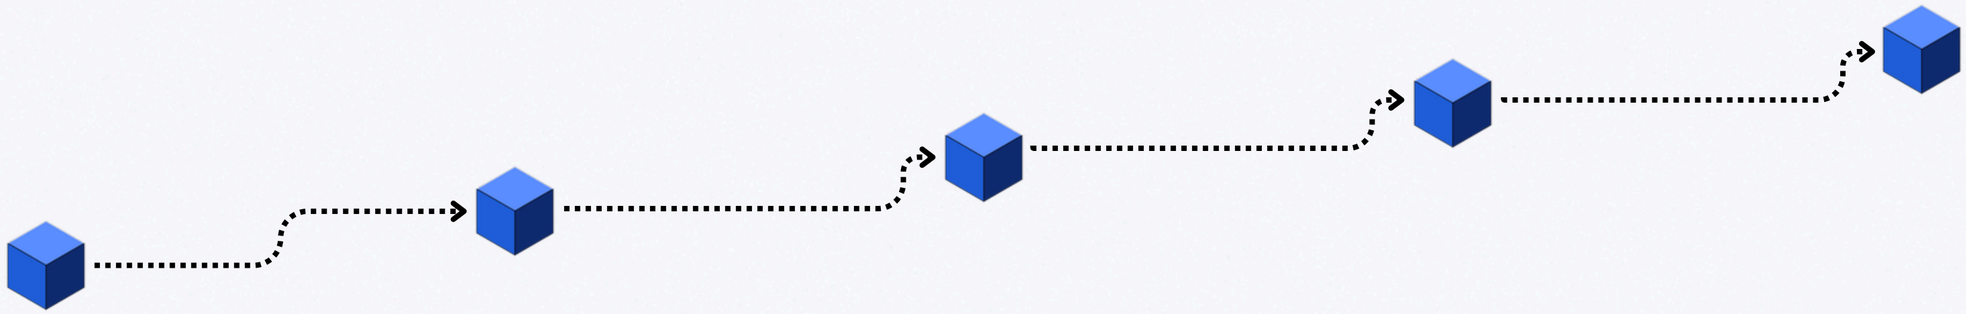
## C Portfolio website

A fast, focused site that turns visitors into enquiries.

**AMONG 30+ WEBSITES EACH SHIPS WITH** Schema markup · Sitemap and robots · Mobile speed checks · Analytics · Enquiry tracking

HOW WE WORK

# Five steps, one accountable team



01

## Discover

A visit or call to see how work really flows: people, paper, data and pain points.

02

## Design

We map the workflow, agree the scope and share a fixed quote.

03

## Build

Delivered in phases, so the first module is in use early and feedback shapes the rest.

04

## Deploy

Data migration, setup with your item codes and approval chains, and on-site or online training.

05

## Support

Bug fixes, security updates, performance work and new features as you grow.

**SUPPORT** Long-term support and upgrades for every system we build, with a direct line to the team that built it.

WHY QLOAX

# What you can hold us to

## 01 Business problem first

We design on the shop floor, at the front desk and at the gate, not only from a requirements document.

## 02 AI with guardrails

Our AI reads your data, explains every finding and leaves the decision to a person.

## 03 Privacy by design

We build compliance products for India's DPDP Act and design our own systems so personal data stays isolated.

## 04 Fast, phased delivery

Websites in 7 days. Larger systems ship in phases, so value shows up early.

**WE BUILD FOR** Manufacturing · Education · Healthcare & labs · Lending & insurance · Real estate · Retail & e-commerce
